

**10P MEMBRANE CONTROL PANEL**

12V

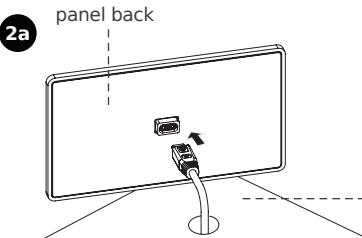

24V

- Ultra compact panel size
- Easy to install – no mounting depth, minimum holedrilling (13.0 × 8.5 mm)
- Flexible wiring – control relay box installed apart from the touch panel
- You can use readily available micro-USB cables up to 5mtrs in length IF they are properly shielded (don't buy cheap stuff)
- IP67-protected even under temporary water immersion (panel only)
- ON-indication LED / 10 A self-resetable fuse for each outlet
- Backlight module allowing easy operation in darkness
- Programmable momentary button
- Control devices by your mobile via bluetooth-connection (iOS/Android)

**INSTALLATION INSTRUCTIONS**

**Mark the hole** at the desired panel position on your dashboard and cut the hole accordingly.

From the back of dashboard, insert the **micro USB cable**\* to the front.

Connect the micro USB plug to the socket to the back of panel.

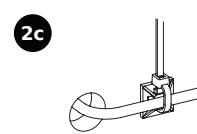

dashboard

**PRODUCT SPECIFICATIONS**

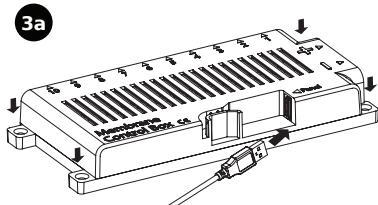

|                    |                                |
|--------------------|--------------------------------|
| faceplate          | PET membrane touch panel       |
| circuit protection | built-in resettable fuse (PTC) |
| switch ratings     | 10A per outlet                 |
| panel rating       | max cumulative Amp: 60A        |
| voltage rating     | DC 11-30V                      |
| notes              | IP67 (membrane panel)          |
| power terminals    | M5 stud size ring terminals    |
| load terminals     | 250 Quick Terminals (male)     |

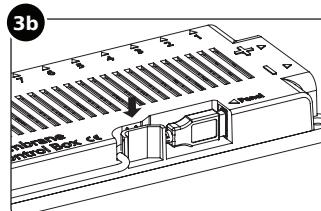

**Mount the panel** firmly onto the dashboard with self-adhesive in the back.

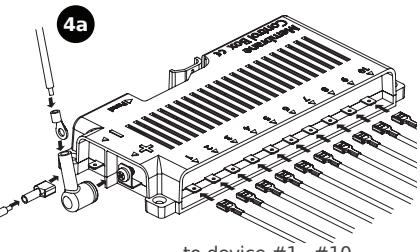

**Attach the cable** using the cable tie\* and hook onto the wall to avoid accidental drop of the cable.

**Install the Control Box** properly with the screws\*. Insert the other end of the **micro USB cable** into the Control Box.

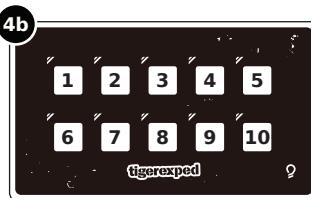

**Squeeze the cable** into the strain relief hook on the box as illustrated.

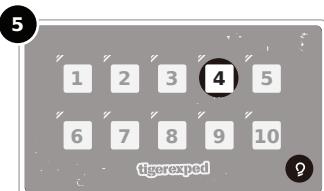

Crimp the **DC positive wire** (+) with the round terminal\*. Pass the wire through the insulator\* and connect to the screw terminals. Cover the terminals with the insulator properly.

Crimp the **DC negative wire** (-) with the insulated 0.250" female terminal and insert into the negative quick terminal\* on Control Box.

**Connect** the load terminals to the desired devices.

The numbers on top of the load terminals correspond to the numbers on the membrane touch panel as shown in the left.

**Momentary Button Set-up** To set up a specific button to be momentary (Push-On), press the button and the backlight button simultaneously for more than 5 seconds until the button blinks.

To undo this (change the button back to ON-OFF), simply repeat the process again on the same button.

**All buttons can be set to be momentary;** only 1 momentary button can be pressed at the same time.

\*included

## HOW TO PAIR ▶ MY CONTROL PANEL

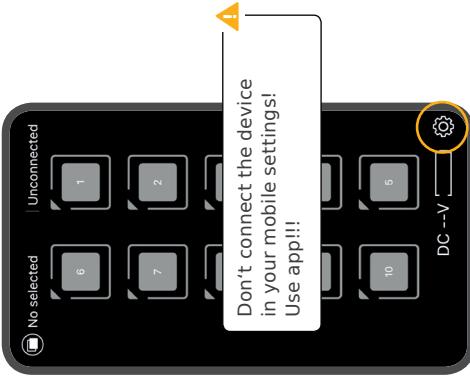

download + install  
**MY CONTROL PANEL**

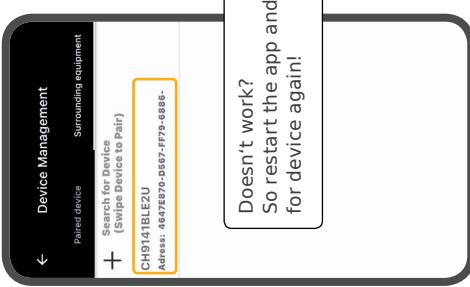

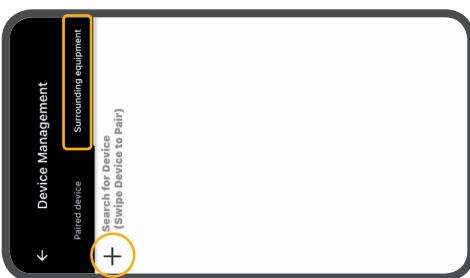

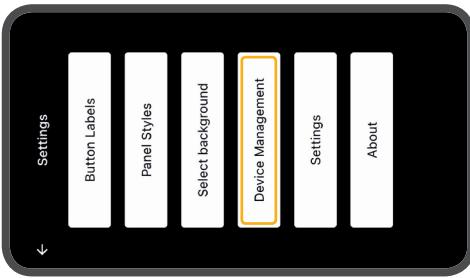

tigerjetzt/rc-box-ios

tigerjetzt/rc-box-android

Don't connect the device  
in your mobile settings!  
Use app!!

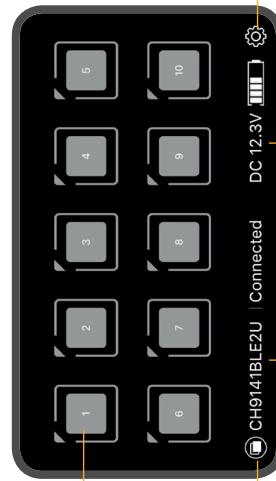

Doesn't work?  
So restart the app and search  
for device again!

▶ switch on the **bluetooth-**  
**connection** of your mobile

▶ start **MY CONTROL PANEL** and  
choose settings

- ▶ go to device management
- ▶ search for **device** in the right tab
- ▶ look for an ID such as  
**CH9141BLE4U** (example!)

- ▶ swipe left to pair and enter  
**PASSWORD 0000**
- ▶ now you can see the paired device  
in the left tab

buttons #1~#10  
(customizable  
in the settings)

switching between  
different control boxes

current device | connection status      system voltage monitor

**settings** ▶  
you can set up a  
specific button to be  
momentary (push-on),  
change button labels,  
panel styles and  
background.
